

## Overview

Conveyors for transportation of material from one processing station to another. MotionFab offers integration of a variety of conveying and features:

- > Roller Gravity Feed
- > Indexing Conveyors
- > Double Stacked Conveyors
- > Roller Driven
- > Curves & turns
- > Accumulating Conveyors
- > Food Grade & Easy Wash Down
- > Easy Tensioning
- > Cleated Belt
- > Stainless Steel, Painted, or Aluminum
- > High Friction Conveyors
- > Inverter Controlled
- > Self Aligning Belt
- > Low Profile
- > Line Transfers

## Double Stacked Conveying

Double stacked conveyors to transport packaging to and from a processing station. Once completed at the processing station, package it sent back on a gravity feed upper conveyor. Two belt driven conveyors below with one accumulating & one a high friction surface.

## Side mount high friction

Side mounted high friction belt to aid in transportation of material down slow dead zones or material handling via pinching.

## Indexing Cleated Conveyor

Dynamic Unload of material onto a cleated indexing conveyor. Cleats allows for accurate tray positioning.

Servo solution allows for Conveyor to move back and forth as required to populate the material on trays.
