

Design Engineering

Our design engineering service offering is tailored to provide a single vendor solution whether it be the design of a simple mechanical part or the design and implementation of an automation

solution integrating mechanisms and control. Our engineering affiliates bring a broad range of experience including but not limited to:

- Mechanical Design including 3-d solid modeling & analysis
- Soft & Hard PLC Programming with SCADA
- Microcontroller Programming
- Custom HMI & Interface Programming
- Low Power Electrical Control & Panel Design including schematic generation
- Process, Tooling, Control and Machine Design for cutting of plastics and organic materials
- Process, Control and Machine design for polishing of plastics and organic materials
- Automated Material Handling Solutions for both pneumatic and linear servo applications
- Machine tool qualification to UL and CE Standards.
- Assembly, Integration & Testing

Precision Machining

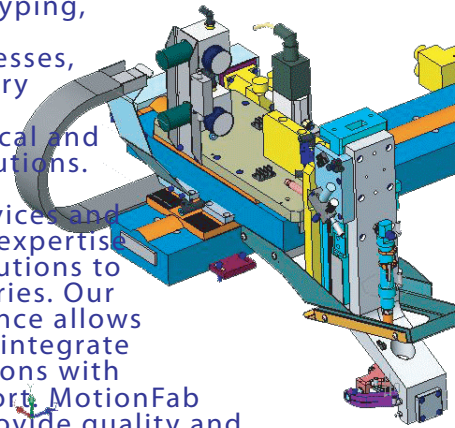

MotionFab Ltd. produces contract machine precision parts and assemblies. Customers range from aerospace, military and health industries. Our key capabilities include:

- CNC Vertical Machining
- CNC Turning
- Assembly and Integration
- Quality Inspection

Company Profile

MotionFab Ltd. was established in January 2004 for the purpose of providing customers with a vertically integrated solution encompassing custom design engineering services, prototyping, manufacturing /assembly processes, and after delivery support for electromechanical and automation solutions.

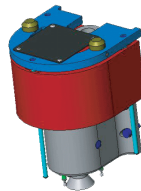

MotionFab services and manufacturing expertise can provide solutions to multiple industries. Our diverse experience allows us to build and integrate complete solutions with follow up support. MotionFab continues to provide quality and cost effective custom business solutions with improved productivity.

Companies range with small automation projects and precision machining fabrication to complex prototyping and system development. Motionfab continues to gain familiarity of high new innovative industrial engineering products from suppliers which makes us capable to provide solutions from low level microcontroller to Soft PLC SCADA systems, circuit boards to electrical panels, or precision machined parts to automated turn-key solutions.

MotionFab Ltd. is committed to developing service offerings to support a wide range of commercial and industrial markets, including but not limited to ophthalmic manufacturing equipment, industrial process and equipment automation, and custom machining services either Build To Print or to Design.

Field Technical Services and Parts Distribution

Full range of Installation and Field Service capabilities to provide Field Support, Project Management, and Training for the automated production equipment market, including the Ultra-Lab ophthalmic production equipment. Parts sales and rebuild capabilities for the support of Ultra-Lab line of production equipment. Parts stocking depots in both Columbus and Dallas to provide same day or next day delivery of specialized parts and components.

Field Engineers are located in Columbus , Ohio and Dallas , Texas , with an average of 16 years of experience in automated production equipment maintenance and installation. Specialties include, Automated control Systems, mechanical and electrical diagnosis and repair of highly automated production equipment.

Project Management and onsite support for equipment re-locations and new equipment installations, production start-up, and technical training.
